Course Description
This course provides discussions of ethical issues and societal challenges derived from scientific research and professional activities. Students examine the sources, fundamental principles, and applications of ethical behavior; the relationship between personal ethics and social responsibility of organizations; and the stakeholder management concept. Students apply ethical principles to different types of organizations: business, non-profits, government, health care, science/technology, and other professional groups. Topics also include integrity of scientific research and literature and responsibilities of scientists to society, intellectual property, ethical practices in professional fields, ethical dilemmas in using animal or human subjects in experimentation, gene cloning, animal cloning, gene manipulation, genetic engineering, genetic counseling, and ethical issues of applying biotechnology in agricultural fields. The course emphasizes the study of cases to explore ethical issues.

- describe the major elements of ethical theory;
- analyze and present results of complex ethics cases;
- prepare and give effective oral presentations about ethical issues, and;
- conduct research and write a 1000 word paper on an aspect of ethics.
